Further explanation of items cited:

As understood, the NCR 7860 scanner, described in the Wike article *Optical Design and Development of a Small Barcode Scanning Module*, and illustrated in the three photographs, had the capability of switching between two different scan patterns by pressing a button on the scanner housing. Thus, the scanner had two modes: (1) a hands-free mode generating multi-intersecting lines scan pattern (see Figure 2); or (2) a hand-held mode actuated by pressing a button on the housing, the scanner then generating a scan pattern consisting of a single scan line.

The cited 4,971,410 patent (owned by NCR Corporation) describes various details and alternatives for structure and operation for a bar code scanner having the capability of switching between two different scan patterns.
